Description of Issue:
 A test fitment of the -039 Engine Oil Drain Kit revealed that the current design allows the oil in the oil sump to transfer to the accessory gear box, this is not the case under normal operation. This drops oil volume in the oil sump below the oil level sight glass, making it impossible to check the oil level without running the engine. If the oil level is low, there is the potential of damaging the engine.
 - rework of the design is required

no new kits shall be shipped to customers until the changes have been incorporated
